

Water Crossing Notification

Coastal GasLink is keeping our neighbors along the project route informed on construction activities happening near their community. Please note the following information:

What: Direct Pipe Installation (DPI) construction activities will be taking place at the Salmon River along the pipeline right-of-way.

Direct Pipe Method: The Direct Pipe Installation (“DPI”) method mitigates the environmental risks typically associated with traditional horizontal directional drilling under rivers, roads and rail crossings. The drilling system also eliminates the danger and additional time associated with the horizontal directional drill. The DPI process is a tunneling method using a tunneling machine connected to prefabricated pipeline which tunnels a path through the earth while also simultaneously pulling and installing the pipe. This method will minimize disruption to instream activities, the surrounding environment, fish habitat and the riverbank. To learn more, please visit coastalgaslink.com.

When: Beginning on October 26, 2020 construction activities will take place 24 hours per day and continue until December 2, 2020.

Where: Construction activities will occur at KP 254+100 to KP 254+400 under the Salmon River along the pipeline right-of-way with the nearest community of Prince George, B.C., located approximately 60 kilometers southeast of this activity.

Expected Duration: October 26, 2020 through to December 2, 2020.

Potential Impact: Public access to this segment of the Salmon River via watercraft is not restricted at this time. Only the DPI entry and exit pads will be restricted during this period. It is not expected that these activities will result in any detectable sound or vibration beyond the immediate work area.

Map: Please see the following page.
