

Water Crossing Notification

Crocker Creek

Coastal GasLink is committed to creating an extraordinary legacy of safety and respect for all people, communities and the environment. As part of this commitment, we are keeping our neighbors along the project route informed on construction activities happening near their community. Please note the following information:

What: Direct Pipe Installation (DPI) construction activities will be taking place at the Crocker Creek along the pipeline construction corridor.

Direct Pipe Method: DPI is a hybrid of horizontal directional drilling and micro tunneling (a pipe jack operation that utilizes a micro tunneling bore machine). This method will minimize disruption to instream activities, the surrounding environment, fish habitat and the riverbank. To learn more about how we take care of our rivers and streams, please visit coastalgaslink.com.

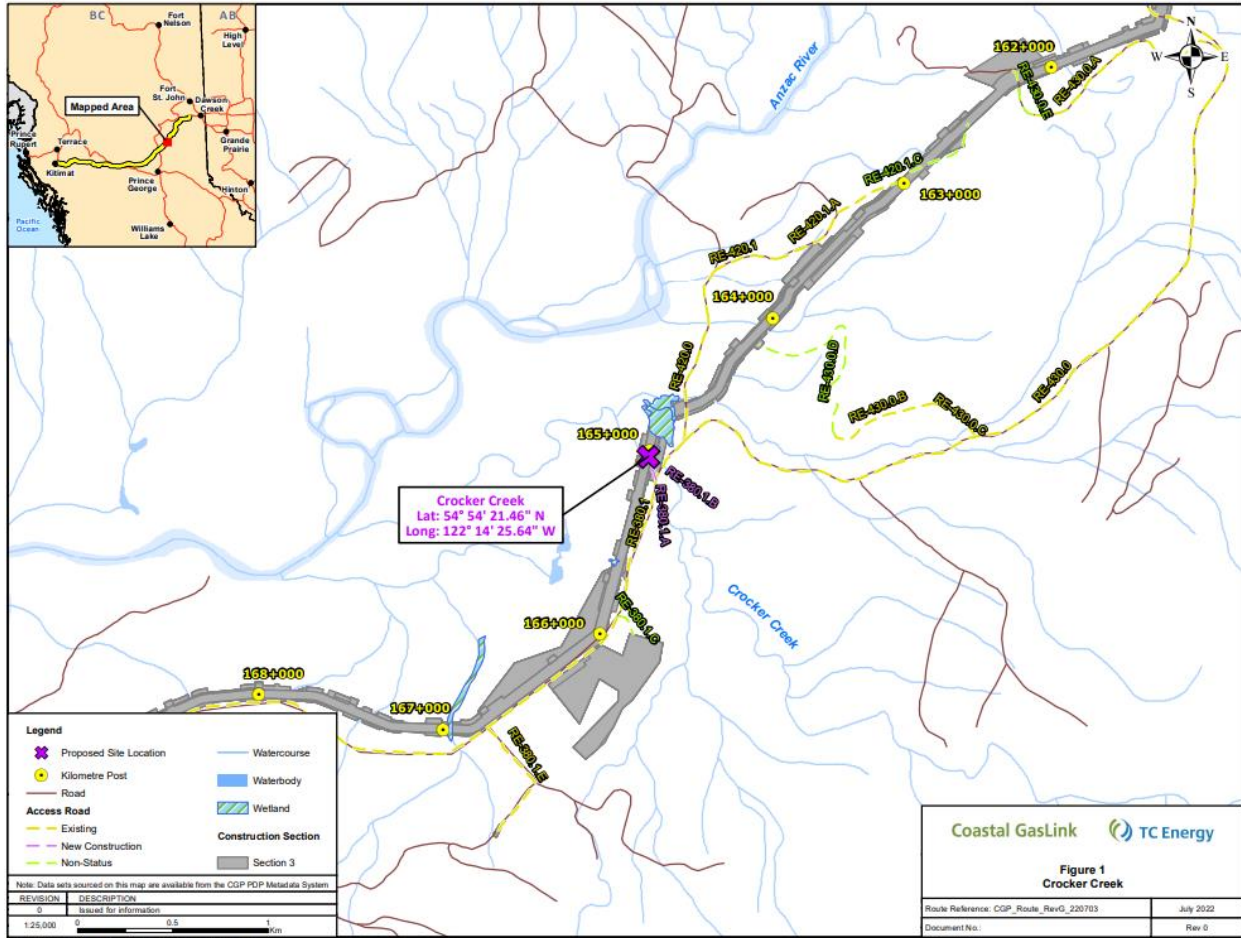

When: Beginning on August 30, 2022 construction activities will take place 24 hours per day and continue until September 18, 2022.

Where: Construction activities will occur at KP 165+034 to KP 165+700 along the pipeline row-of-way. The nearest community of Bear Lake is located approximately 53 kilometers southwest of this activity.

Expected Duration: Drilling will occur August 30, 2022 through to September 18, 2022 **Note – there will be clean-up activities continuing into October.

Potential Impact: Public access to this segment of the Crocker Creek via watercraft is **not restricted** at this time and only the DPI entry and exit pads will be restricted during this period. There are no residences located within this area. It is not expected that these activities will result in any detectable sound or vibration beyond the immediate work area.

Map: Please see the following page.

Questions regarding these activities or general project construction can be directed via email to coastalgaslink@tcenergy.com or by phone to 1-855-633-2011
