

Coastal GasLink Cedar Link Project

The proposed Cedar Link Project will connect to and receive natural gas from Coastal GasLink for delivery to the Cedar LNG Project, a proposed floating liquefied natural gas (LNG) facility in Kitimat, BC, owned by Haisla Nation and Pembina Pipeline Corporation, within the traditional territory of the Haisla Nation.

The Cedar Link Project includes an approximately 10 km pipeline and a new meter station that is owned by Coastal GasLink and operated by TC Energy.

The Project is in the early stages of planning and engineering on the additional facilities required to support the Cedar LNG Project with plans to file applications with the BC Oil & Gas Commission (BC OGC) for the new pipeline and meter station in early 2022.

Project details

In order to deliver natural gas from Coastal GasLink to Cedar LNG, the following components are being considered as part of the proposed Cedar Link Project:

- **Proposed Cedar Link Pipeline:** an approximately 10 km pipeline starting from the Coastal GasLink Kitimat Meter Station and joining the Cedar LNG project via a connection point in the District of Kitimat, B.C. The pipeline will follow the existing Coastal GasLink pipeline route where practical and technically feasible.
- **Proposed Cedar Link Meter Station:** a new meter station is required to measure the gas that will flow to Cedar LNG. The Cedar Link meter station will be located adjacent to the existing Coastal GasLink Kitimat Meter Station within the District of Kitimat.

Routing & Regulatory Process

- In determining the potential pipeline route and meter station location, a number of factors were considered, including safety, constructability, environmental sensitivities, land use compatibility, economics, vegetation, archeological and historical sites.
- The Cedar Link Project plans to file applications with the BC OGC for the new pipeline and meter station in early 2022.

Timeline

Q1 – Q4 2021

Engagement with Indigenous groups, landowners, and local communities.

Early 2022

Engagement with Indigenous groups and stakeholders; anticipate filing applications with the BC OGC. Engagement will continue with all affected Indigenous groups and stakeholders through development.

2025

Pending regulatory approval and a final investment decision by Cedar LNG, we anticipate Cedar Link Project construction could start as early as 2025.

Engaging with Indigenous and non-Indigenous community members

- In 2021, initial engagement with Indigenous groups, landowners and local government officials was initiated. The Project will begin public engagement in early 2022.
- The Cedar Link Project shares the same values as Coastal GasLink in ensuring the safety of our workforce and their families, Indigenous and local communities, and the environment. Indigenous groups and stakeholders can expect the same high standard of engagement on the Cedar Link Project that they experience with Coastal GasLink.
- The Cedar Link Project is committed to achieving the highest standards of environmental protection during construction and for the life of the project. We are focused on constructing this project safely and with respect for all people and communities.
- We look forward to continued collaboration with Indigenous groups, local government officials, landowners, and the community as we enter 2022. We appreciate the time and input provided so that we can consider feedback as part of our early planning process.

Delivering local benefits

- The Cedar Link Project is committed to creating meaningful opportunities for Indigenous and local communities to participate in the Project. Should a decision be made to move ahead with the construction and operation of the project facilities, we anticipate the construction of these facilities will create new construction jobs and contracting opportunities.
- We are committed to investing in communities in the long-term, through investments, sponsorships, and programs that go beyond our operations. We are also committed to hiring local Indigenous and non-Indigenous people first on our project.

Safety is our number one value

Pipelines are the safest method to transport natural gas. With over 65 years of experience building and operating pipelines, we are committed to keeping our workers, the environment and your community safe. Here's how we will ensure safety during construction and operation:

During construction

- Our workforce has undergone comprehensive safety training to ensure that they keep each other, local communities and the environment safe.
- Top quality steel and welding techniques applied by highly skilled workers with the latest training and best practices.
- Welds checked by ultrasonic inspection and/or x-ray.
- Pipelines coated to protect against corrosion.

- Pressure-testing to ensure the pipeline is sealed and ready for operation.

During operation

- 24/7 monitoring from a state-of-the-art Gas Control Centre.
- Extensive maintenance, aerial patrols, on-the-ground inspection and inline inspection to monitor pipeline conditions.
- Comprehensive Emergency Response Program developed in collaboration with local emergency response providers to ensure a coordinated response in the event of an incident.

Protecting the environment

Cedar Link is committed to achieving the highest standards of environmental protection during construction, and for the life of the project. Coastal GasLink, along with qualified professionals, are working together with Indigenous communities to ensure that the Project is approached with the utmost care to prevent adverse impacts on the environment.

Keep in touch

We want to make sure you have access to the information you need about the project. Here are the many ways you can reach out and learn more. Please be sure to reference the Cedar Link Project in your inquiry:
