

Coastal GasLink

Employment and contracting opportunities

Coastal GasLink is committed to providing well-paying contracting and employment opportunities to qualified Indigenous and local businesses and individuals across the project.

The majority of opportunities will be during the project's construction phase, with more than 2,500 high-quality, well-paying jobs created during peak construction.

We are also committed to expanding the skills and capacity within local communities for current and future operational opportunities.

Employment opportunities on Coastal GasLink include a variety of responsibilities, skill levels, and trade specializations. Labourers, equipment operators, nurse practitioners, chefs, administrators, environmental monitors, skilled tradespersons, and project managers are just a few of the diverse jobs that are being created by the project.

There will also be opportunities for specialists to work on compressor and meter facilities. These facilities are important pieces of infrastructure that ensure natural gas moves through

the pipeline safely and efficiently. Construction of the Wilde Lake Compressor Station and the Kitimat Meter Station is currently underway.

Coastal GasLink's prime contractors are responsible for directly hiring workers and contracting for goods and services, with a commitment to Indigenous and

local workers and businesses, subject to qualifications.

Visit CoastalGasLink.com/Employment to connect with our prime contractors and explore opportunities across the project today.

Did you know?

Coastal GasLink's parent company, TC Energy, has hundreds of open job opportunities throughout North America. With over 65 years of experience as a leader in building and operating pipelines across the region, TC Energy is always looking for qualified people to join its team.

To learn more about current opportunities, visit tcenergy.com/careers.

Construction employment opportunities

Construction of the Coastal GasLink project is currently underway by our five prime contractors across the 670-kilometre right-of-way to meet our planned in-service date of 2023.

Construction activities include access road development, right-of-way clearing and grading, gravel processing, preparation of workforce accommodations and storage sites, pipe stringing, welding, pipe installation, site cleanup, and reclamation.

Employment opportunities and qualifications required to undertake these activities include:

- **Entry level jobs** – Labourers, skilled and administrative positions. Previous pipeline-related experience not required. On-the-job training will be provided.
- **Trades** – In addition to completing Grade 12, trades require certification or enrollment in an approved apprenticeship program. Skilled labour positions require some experience in the relevant field.
- **Technical and professional jobs** – Technical positions generally require a certificate or diploma from a technical institute in fields such as mechanical and instrumentation. Professional positions generally require a university degree or a technical institute diploma such as engineering, environmental studies or occupational health and safety.

All individuals must have a commitment to safety, and the ability to work in a team environment. Workers must undergo drug and alcohol testing.

Contracting opportunities

Not only will construction create thousands of high-quality jobs, there will also be increased demand for the use of local goods and services, including things like construction and maintenance equipment, food and accommodation, hardware, fuel, equipment servicing and more.

Much of the total construction cost will be spent in B.C., with a commitment to providing opportunities to Indigenous and local businesses.

Coastal GasLink works closely with Indigenous and local communities, businesses and economic development

organizations to identify opportunities for local businesses to participate in the project. Together with our prime contractors and local unions, we are committed to ensuring that all contracting opportunities meet the highest safety standards.

Meet our prime contractors

Our prime contractors are responsible for directly hiring more than 2,500 workers at peak construction, with a focus on maximizing opportunities for competitive, qualified Indigenous and local businesses in northern B.C.

In selecting our prime contractors, we sought out highly-qualified companies that met our core principles for safety, environmental stewardship and engagement with Indigenous and local communities.
