

Coastal GasLink

Wilde Lake Compressor Station and Receipt Meter Station

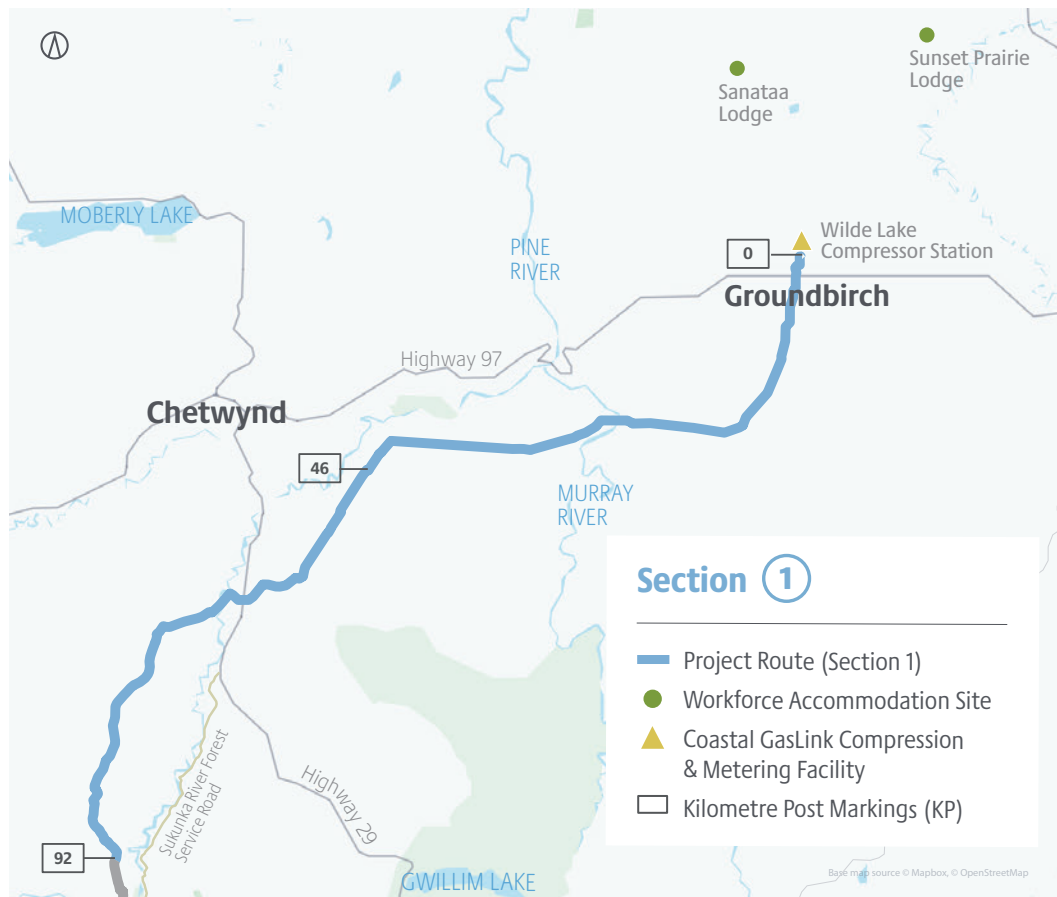

Facility details

The Coastal GasLink project includes the construction and operation of the Wilde Lake compressor and meter station at Groundbirch, B.C., to support the 670-kilometre provincially-regulated pipeline in safely delivering clean Canadian natural gas to LNG Canada's liquefaction facility in Kitimat.

The Wilde Lake facility will initially power the transportation of 2.1 billion cubic feet of natural gas per day (bcf/d) and the project has the potential to move up to 5 bcf/d with the addition of compression facilities along the pipeline as contemplated within Coastal GasLink's approved Environmental Assessment Certificate (EAC), subject to further project applications.

Coastal GasLink will own the Wilde Lake Compressor Station and TransCanada Pipelines Limited (TCPL) will be the operator. Both Coastal GasLink and TCPL are owned by TC Energy.

Facility construction schedule

Q3 2020

Start construction

Q4 2022

Anticipated completion date

Q1 2023

Anticipated in-service date

What to expect during construction

Traffic: During construction there will be a temporary increase in traffic flow to and from the site as crews and equipment mobilize. After the new facilities have been installed, there will be nominal traffic associated with ongoing operations and maintenance of the facilities.

Equipment on-site: During construction, there may be equipment on-site for use in earth moving, pile driving, excavation, material handling/hauling, welding and testing. Equipment may include backhoes, pile driving units, trucks, generators and compressors.

Clean-up and reclamation: Once construction is complete, the land surface outside of Coastal GasLink's fence line will be reclaimed to an equivalent land capability. Measures will be taken to prevent surface material loss from wind and water erosion, and to establish a vegetative cover that is compatible with surrounding vegetation and land use. Within the site, a gravel surface will be placed over portions of the site.

Creating an extraordinary legacy of safety and respect

Coastal GasLink is committed to creating a legacy of safety and respect for all people, communities and the environment. The project is delivering significant, long-term benefits to Indigenous and local communities, the province and Canada, while helping to meet the growing global demand for cleaner energy.

Employment and contracting:

View our employment page on [CoastalGasLink.com](https://www.coastalgaslink.com) to connect with the prime contractor to learn about opportunities for this facility.

Annual revenue to support local services:

When the Wilde Lake facility is operational, annual tax payments will help support schools and hospitals, emergency services, recreational facilities, recycling programs and other local programs vital to sustaining communities.

Building stronger communities:

Whether it's partnering with community groups or supporting local initiatives, our goal is to build strong and vibrant communities along the Coastal GasLink route. As we plan, construct and operate the pipeline, we are committed to investing in initiatives that enable communities like yours to thrive.
